(14) Data Mining
Definition: Data Mining is searching large datasets for hidden patterns or relationships that are not immediately obvious. It uses algorithms to find insights humans might easily miss.
Example: A supermarket discovered through data mining that customers who buy nappies on weekends also tend to buy beer - influencing how products are placed in store.

(15) Data Visualization
Definition: means presenting data visually - through charts, graphs or infographics - so it is easier to understand quickly, especially for non-technical audiences.
Examples: A line graph showing monthly revenue over 12 months makes growth trends immediately visible in a way that a raw spreadsheet does not.

(16) Dashboard
Definition: A Dashboard is a single screen displaying multiple key metrics and charts usually updated in real time. It lets managers check performance at a glance without digging through raw data.
Emp: A sales dashboard might show today's revenue, deals closed, and each reps progress toward their monthly target - all updating live.
